Raghava S

Staff Software Engineer | Full Stack

raghavashettysar@gmail.com | +91 9164981654 | Bengaluru, Karnataka | linkedin.com/in/raghava-shetty

PROFESSIONAL SUMMARY

Full Stack Engineer with 9+ years of experience building cloud-native platforms for enterprise products, spanning AWS infrastructure, deployment pipelines, and platform architecture design. Led the frontend architecture of ZedControl's AI Assistant and the Design System adopted across a platform managing 10,000+ edge nodes. Sets frontend standards and reviews code while staying hands-on across React, TypeScript, Node.js, Deno, Go, and AWS.

TECHNICAL SKILLS

Frontend: React JS, TypeScript, JavaScript, Redux, HTML, SCSS, Design Systems

Backend: Node.js, Go, Deno

APIs and Architecture: REST APIs, gRPC, Kafka, Monolith to Microservices

Cloud and DevOps: AWS, AWS CDK, AWS Lambda, Serverless, Docker, CI/CD

Databases: PostgreSQL, DynamoDB, MongoDB

Testing: Jest, Cypress

AI and LLM: AI Agents, MCP Server, LLM Integration, AI-assisted Development (Claude, Cursor, GitHub Copilot)

Other: Linux, Shell Script, Git, C, C++

PROFESSIONAL EXPERIENCE

Introsort Technologies Private Limited

Jul 2026 - Present

Staff Software Engineer, Full Stack

Scheduling and payroll calculation platform for the healthcare industry, built with React JS, TypeScript, Deno, and AWS.

- Designed and built a new payroll processing service, delivered as a proof of concept for a new client, that calculates pay for a facility's employees over a given period based on their contracts, hours worked, and bonuses.
- Set up the AWS infrastructure and deployment pipelines as code using AWS CDK.
- Worked on the architecture design for a unified platform, moving an existing monolith toward a microservices structure.
- Built payroll features across React and TypeScript frontend screens and Deno backend services, while mentoring a junior engineer on the team.

Zededa India Private Limited

Oct 2021 - Jun 2026

Staff Software Engineer, Full Stack

ZedControl is Zededa's cloud-native SaaS console for deploying and orchestrating distributed edge AI workloads across 10,000+ edge nodes on EVE-OS.

- Led frontend architecture and delivery of ZedControl's AI Assistant, integrating MCP server and AI agent workflows so users could query their edge infrastructure in real time, helping reduce support tickets and drive product adoption.
- Initiated and led the product-wide Design System component library, bringing consistency to the UI and cutting per-feature frontend rework by around 40%.

- Established frontend coding standards and component patterns across the ZedControl React, Redux, and JavaScript codebase, reviewed pull requests, and worked with product and backend teams to define API contracts and feature scope.
- Implemented the 802.1X network authentication flow end to end, writing the backend service in Go and the frontend integration in React, for secure network access control across edge devices.
- Delivered features end to end across edge node management, Kubernetes-based service management, device orchestration, app marketplace, user onboarding, and TOTP-based 2FA, from technical design through implementation, Jest unit tests, and Cypress E2E tests.
- Worked with Kafka-based streaming pipelines, gRPC services, and PostgreSQL supporting real-time device telemetry and event-driven processing across edge nodes.

InTimeTec VisionSoft Pvt. Ltd.

Jul 2017 - Oct 2021

Sr. Software Engineer (promoted from Software Engineer and Jr. Software Engineer)

Worked on full-stack web, serverless cloud, IoT, and embedded projects for clients including HP.

HP PS Service Portal

- Built React frontend features in JavaScript and TypeScript for HP's Personal Systems Services portal, a platform for HP customers to book HP services.
- Built serverless APIs in Node.js on AWS Lambda with DynamoDB, MongoDB, and S3, covered by Jest unit tests and Cypress end-to-end tests.

HP-JAB IoT

- Built Docker containers running shell-script services on a Raspberry Pi based Linux device to collect data from HP printers and send it to the cloud, including Wi-Fi and LAN setup so users could connect to the device and configure its network.
- Implemented secure boot with GRUB and shim signing and TPM-based encryption for device credentials, managed device services with systemd, and automated flashing of bootable images.

SGW Embedded

- Worked on C firmware for a handheld STM32-based GPS device used by hunters to mark a target's position and distance, then navigate to it using GPS coordinates.

EDUCATION

Bachelor of Engineering, Information Science

The National Institute of Engineering (NIE), Mysore, 2017. CGPA 8.5

LANGUAGES

Kannada, English, Telugu, Hindi
